Cyber security solutions for West Australian businesses

The CAG Disaster Readiness audit will test all of the above and give you peace of mind

The Computing Australia Group has a rapid response team available at short notice. We can help thwart a cyber attack in progress and prevent any future incident from occurring.

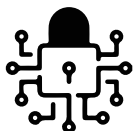

Disaster Recovery Readiness

A serious IT disaster can hit your business at any time and being prepared is the best way to shorten the resulting downtime.

Good backups are key. Every backup system needs to be tested regularly – at least once every few months it is worth having your IT provider do a sample restore and certainly once a year you need to ensure that a full recovery is attempted. We have seen many instances where a backup system has NEVER been tested – you don't want a disaster to turn into a double disaster so ensure your backups are certified to work.

The danger from within

50% of all cyber security events happen from inside an organisation. That's a sobering fact.

Some of these are outright cyber crimes initiated by an employee, while others are caused by a lack of cyber security awareness. Staff are already well past the limitations that an external hacker will face because they are inside your network.

There are many steps that can be taken to detect and deter malicious activity by staff. Sometimes these are very simple strategies like tightening security permissions on the network but can also include software to monitor employees in real time.

We also offer cybersecurity training for the staff. Our experts would guide your staff in understanding and avoiding the pitfalls of cybersecurity, how even innocent activities like clicking an untrusted link can be fatal to your business.

The CAG Disaster Readiness audit will test all of the above and give you peace of mind. Contact us today.
