Custom solutions, when off the shelf software doesn't fit

The CAG development team can craft a unique solution for your business

Computing Australia can help you to look for a suitable solution or assist you to develop a bespoke software solution. It is a big step taking the custom software route and choosing the right company is an important first step.

What to Expect

It is a big step to decide to developing new software. Businesses usually prefer to find an off the shelf solution and we always encourage clients to consider this before taking the custom route.

Good software takes time to develop. This is often the elephant in the room - business owners should always ask themselves if they have the resources and time required to develop a mature solution.

Every project needs to begin with a needs analysis prior to undertaking a specification and wire frame. These steps are important so that both parties are clear on what is going to happen next. The old adage of fails to plan = plan to fail is very pertinent when developing software.

SERVICES OFFERED

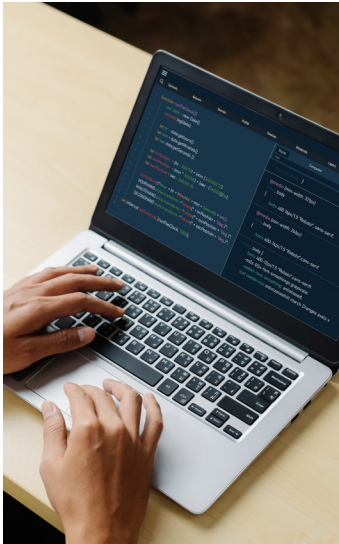

CONSULTING

ANALYSIS

DEVELOPMENT & SUPPORT

How do we approach a project?

We conduct a needs analysis, often referred to as a business process analysis. This allows us to map out the key requirements and present you with an accurate plan before we start coding. This avoids misunderstandings and ensures you get exactly what you expect.

We use an Agile coding approach which means you do not need to wait until the conclusion of the project to start using your new software. By making software releases available as they evolve, it gives you good oversight of our progress and allows you to make changes as we work.

What makes us different is that we talk to you (not at you) and we learn about your business.

Our proposal will be tailored to your business needs and will make a difference to you. Our consultant will explain the proposal in detail - we don't hide behind technicalities. We see the client as an equal partner in the web development cycle.

For a fresh look at software development - talk to the CAG Software development team. Experience a fresh difference with The Computing Australia Group.
