A secure Network Operations Centre solution based right here in Perth, Western Australia

A dedicated support team – on call, around the clock – when you need them

The Computing Australia Group operates a dedicated 7 day Network Operations Centre to guard and assess your business around the clock.

CloudSuite

The Computing Australia Group utilises our own proprietary CloudSuite package that provides around the clock monitoring of your computers and critical infrastructure.

CloudSuite delivers a seamless NOC and help desk experience by allowing us to maintain your computers in peak condition and provide remote IT network support wherever you happen to be working from.

WHY COMPUTING AUSTRALIA?

INVESTMENT IN CLIENT DOCUMENTATION

DEDICATED ACCOUNT MANAGERS

SOLUTIONS TO PROBLEMS

QUALITY CONTROL SYSTEMS

Artificial Intelligence

The CAG Network Operations Centre (NOC) utilises artificial intelligence to predict problems with key infrastructure like servers and network storage.

Predictive failure analysis points to issues with your system before they occur. Since we're aware of it beforehand, we'll be able to take the remedial action on time and avert outages.

NOC as a Service

If you are a busy IT Manager who lacks the resources to monitor and maintain critical infrastructure, you can utilise our NOC services.

All incidents and outages can be reported directly to you and your team for mediation or alternatively we can step in and take action.
